ADVITIYA SOOD

advitiyasood@gmail.com | +91-9418685850 | github.com/advitiya-sood

Skills

Frontend/Mobile: React Native, ReactJS, JavaScript, TypeScript, Shopify (Liquid).

Backend/Database: Python, Flask, .NET (C#), Docker, Microservices Architecture, System Design, MySql, Vector databases.

AI & Innovation: RAG Pipelines (LangChain, Hugging Face), n8n Workflow Automation, AI Agents, MCP servers, Ollama.

Work Experience

MERIDIANLINK (Bhavna Corp) | Software developer **May 2025 – Present**

- **Led migration and upgrades for the ML Business application**, including security hardening, dependency updates, and Material UI v4→v5 (helped in reducing load time by 5%), while resolving complex Git merge conflicts across 15+ services in a **microservices architecture (Flask + React).**
- **Led the end-to-end development** of an AI Chatbot by orchestrating **RAG (Retrieval-Augmented Generation) pipelines** using **LangChain** and **Hugging Face**; took full initiative in the strategic planning and execution to automate complex information retrieval and enhance internal data accessibility. Improved **internal problem query resolution by 10%.**
- Designed and shipped features across **Flask (Python) and React services**, adhering to clean architecture, code review standards, and increased test coverage by 15% in 5+ services.
- Developed and maintained core features for a specialized **.NET backend service**, ensuring seamless data flow and integration within a polyglot microservices architecture alongside Python and React services.
- Coordinated web application penetration testing and remediated 100% of critical/high impact findings to align with OWASP practices and internal compliance, diagnosed and resolved CI/CD pipeline issues in GitLab (multi-environment builds).

INSIGHT, Noida | Software developer **May 2022 – April 2025**

- Developed and implemented various user facing features in clinical research applications using Typescript, React and Nx.
- Contributed to and assisted in front-end architecture implementation discussions.
- Worked on implementing location, map, and camera functionality in a React Native mobile app.
- Worked on the internal dashboard from scratch and helped convert Power-BI dashboard into React with added functionalities.

FREELANCER | Developer **December 2021 - Present**

- **Legal Document Summarizer:** Developed and enhanced the application using React and FastAPI (Python), integrated OpenAI APIs, collaborated with the client on workflow and design implementation.
- **Shopify Store:** Developed a store for a fashion brand and handled all the third party integrations and custom component development.

Projects

AI Knowledge Retrieval Engine (RAG) Link **Feb'26**

- Developed a RAG pipeline using **LangChain and Hugging Face** to enable semantic search over private datasets.
- Integrated a **Vector Database for high-accuracy contextual retrieval** and source-cited LLM responses.
- Built a React/Flask interface for real-time user interaction and document querying.

Video Friend Link **Oct'23**

*A **peer to peer cross-platform video calling app** made using **React Native CLI.***

- Used Voximplant cloud platform as a Baas to achieve WebRtc functionality.
- Currently expanding functionality to include additional features.

Education

Amity University Noida **2018 - 2022**

- Bachelor of Technology | Computer Science

Sacred Heart Senior Secondary School **2016**

- ICSE Secondary Education
